Date of birth: 22/04/2002

SUMMARY

AI Engineer with 1.7+ years of experience building Generative AI and backend applications using Python, FastAPI, LLMs, SLMs, RAG, AI agents, and vector databases. Experienced in developing document intelligence pipelines, AI inference services, retrieval and reasoning workflows, REST API integrations, and LLM/SLM orchestration. Hands-on exposure to NLP, Computer Vision, SQL, cloud deployment concepts, and end-to-end AI application development.

SKILLS

- **Programming:** Python, SQL
- **Generative AI:** LLMs, SLMs, Prompt Engineering, RAG, Embeddings, Vector Search, AI Agents, Reasoning Pipelines, Tool Calling
- **Backend & APIs:** FastAPI, Flask, REST APIs, AI Inference Services, Backend Development
- **Machine Learning:** TensorFlow, Scikit-learn, CNNs, NLP, Computer Vision, LangChain, Embeddings.
- **Data Engineering:** Data Processing, ETL Pipelines, Text Extraction, Data Transformation
- **Databases:** MySQL, MongoDB, ChromaDB
- **Tools & Clouds:** Git, Jupyter Notebook, Google Colab, AWS, API Deployment Concepts

WORK EXPERIENCE

AI Deployment Specialist – IVEX Ventures (March 2025 – Present)

- Built document intelligence pipeline converting PDFs into structured JSON for AI training.
- Developed RAG applications using Qwen (Ollama) with LLM fallback architecture.
- Optimized prompt engineering, embeddings, vector retrieval, and inference pipelines.
- Designed and deployed Agentic AI applications using RAG pipelines with SLM–LLM orchestration.
- Built AI agents for automated retrieval, reasoning, and task execution using LangChain.
- Integrated REST APIs, vector databases, and external knowledge sources into AI workflows.
- Developed scalable FastAPI backend services for LLM inference and agent execution.
- Built production-ready healthcare AI solutions using structured and unstructured data.
- Improved response accuracy through prompt engineering and retrieval optimization.

Web developer Intern – Bista Technologies (13 May 2024 - 13 July 2024)

Tools/Software Used: cPanel, PageSpeed Insights, HTML, CSS, JavaScript, Bootstrap

- Developed 10+ live web pages, improving page speed by 30% and user engagement by 20%.
- Performed cross-browser testing, optimizing UI performance and accessibility.
- Conducted thorough testing and debugging to ensure optimal performance.

PROJECTS & RESEARCH PAPER

Machine Learning Research Paper – Air Pollution & Fetal Growth – (Submitted)

- Designed an ML-based analytical study to evaluate the impact of air pollution on fetal growth.
- Performed data preprocessing, feature selection, model training, and evaluation.
- Focused on interpretable and reproducible modeling results.

Brain Tumor Detection

- Built a CNN-based brain tumor detection system using MRI images with high classification accuracy. Results shows the percentage of prediction of each class.
- Integrated the trained model into a Flask-based web application supporting single and batch image uploads for inference.
- Github link - <https://github.com/Priyankashaww/Brain-Tumor-Detection>

Symptom-Based Medical Recommendation System

- Designed a logic-based system that takes user symptoms and recommends probable diseases, precautions, suitable workouts, and medical advice.

- Developed a matching algorithm using structured datasets and condition mapping.
- Prediction based on the trained data from the medical dataset.
- Github link - <https://github.com/Priyankashaww/Medical-Recommend-System>

Traffic Sign Recognition using GTSRB Dataset

- Built a CNN model to classify German traffic signs from the GTSRB dataset.
- Preprocessed and augmented image data, achieving over 90% classification accuracy.
- Developed a GUI for user-friendly interaction and real-time sign prediction.
- Github link - <https://github.com/Priyankashaww/Traffic-Sign-Detection>

Bong Voyage – Travel Web Application (MERN Stack)

- Built interactive frontend using React.js
- Designed pages for travel destinations and booking features
- Focused on clean UI and smooth user experience

Restaurant Management System (Django)

- Developed a highly scalable web application for managing restaurant operations, including order processing, table reservations, and varieties of food.
- Integrated role-based access (Admin, Staff, Customer) and secure authentication.

Placement Cell Management System (Django)

- Designed an automated recruitment management platform to streamline student applications and job postings for college and university students.
- Recruiters can post jobs, view student profiles and communicate with them.

Online Shopping Management System (.NET)

- Built an e-commerce platform with product browsing, cart management, and secure payments.
- Designed a responsive UI and backend logic for handling orders and user authentication.

EDUCATION

- | | |
|---|-----------|
| • Master of Computer Application CHRIST (Deemed to be University), Delhi NCR (9.23 CGPA) | 2023-2025 |
| • Bachelor of Computer Application The Calcutta Anglo Gujarati College (9.20 CGPA) | 2020-2023 |

CERTIFICATIONS

- | | |
|-----------------------|---|
| • Issued: August 2025 | AI Fundamentals with IBM SkillsBuild |
| • Issued: June 2025 | Introduction to Modern AI |
| • Issued: May 2024 | 2 days AWS Cloud Workshop |
| • Issued: April 2024 | Introduction To IoT and Digital Transformation - Cisco Networking Academy |

Hobbies: Wanderlust, Traveler, listening music, cooking, Creativity.
